🌐 [linkedin.com/in/soumthakur](https://linkedin.com/in/soumthakur)

## Skills

**Programming Languages:** C++, C#, C, Python

**Engines:** Unreal Engine 5, Unity Engine, Frostbite

**Tools:** Perforce, Git, Jenkins, Jira, Visual Studio, Rider

**Other Skills:** System Design, Debugging, Profiling, Optimization

## Education

**University of Central Florida (FIEA), Master of Science:**

*Interactive Entertainment*

2025 – 2026 | Orlando

**Manipal Institute of Technology, Bachelor of Technology: Mechatronics**

2017 – 2021 | Manipal

## Accomplishments

**3rd Place | FIEA Game Jam 2026**

## Projects

### Mythbound

10/2025 – Present

*Lead Programmer | Unreal Engine 5 | C++*

- Built a 3D lobby using **Epic Online Services** and **Common UI** to handle matchmaking, team selection, and pre-game setup.
- Extended the Character Movement Component (CMC) to implement **custom locomotion** modes with **client-side prediction** to improve responsiveness under high latency.
- Resolved replication and desync bugs across the codebase using the **Visual Logger** to stabilize client-server state.
- Integrated **Jenkins CI/CD** for build automation to accelerate network testing and playtest validation.

### Custom Engine & PvZ Prototype

01/2026 – 05/2026

*Engine & Gameplay Programmer*

- Engineered a **data-driven pipeline**, reading **JSON files** to spawn game objects and configure their properties automatically.
- Implemented a **custom memory manager** in **C++** to minimize heap fragmentation and provide diagnostics to track memory leaks.
- Authored a **unit test** suite using **Microsoft's Native Test Framework** to test edge cases and catch memory leaks across engine services.
- Created a 2D Sprite system by wrapping **Raylib APIs**, collaborating with a 5-person team to build a Plants vs. Zombies clone on the custom engine.

## Work Experience

### Founding Engineer (Games)

07/2022 – 06/2025

*Tomo Club* 🔗

Dublin, OH (Remote)

- Developed networked **AI** and core gameplay for **4+ multiplayer WebGL titles** in **Unity** and **C#**, building **RPC-driven** game systems from prototype through live operations.
- Architected an **SDK** wrapper on top of **Photon PUN 2**, standardizing **netcode** setup and lobby systems to reduce new game integration time by over 60%.
- **Optimized** WebGL performance for Chromebook hardware, reducing CPU cycles and network bandwidth to boost frame rates by 30%.
