

Soumya Thakur

Software Engineer

Experience

Lead Programmer, 10/2025 - Current
Skaldforge, Orlando, FL

- **Authored custom client-side prediction logic** using C++, implementing physics overrides to simulate responsive network sliding.
- **Integrated Jenkins CI/CD pipelines** to automate compilation and build distribution, while standardizing code review protocols to ensure codebase maintainability and defensive coding standards.
- **Resolved network de-syncs** across various locomotion systems, using the **Unreal Visual Logger** to trace RPC payloads and fix state alignment.
- **Collaborated with artists and designers** to establish **data-driven pipelines** for rapid iteration while maintaining strict performance boundaries.

Founding Team Member (Tech), 07/2022 - 06/2025
Tomo Club, King of Prussia, PA

- **Engineered a synchronous session GDK** abstracting Photon lobbies into localized team arenas, exposing a custom API layer to host and execute multiple games in parallel.
- **Developed multiplayer gameplay for four Unity/C# titles**, implementing networked AI, co-op puzzle states, and grid-based mechanics across the full lifecycle
- **Optimized web game performance targets for low-spec Chromebooks**, implementing Interest Groups to reduce network latency, resulting in a 20% increase in frame rate.

Projects

Custom C++ Engine | C++, Raylib

- Architected a data-driven JSON scripting system utilizing Abstract Factory and Chain of Responsibility patterns to handle configuration parsing and runtime object injection.
- Developed a low-level memory service featuring custom multi-heap allocators and static auto-registration to minimize heap fragmentation

Street Fighter Clone | C, OpenGL

- Built a 2-pass collision pipeline separating AABB overlap detection from state resolution to ensure a deterministic simulation loop.
- Built a frame-resolution system to process 18 sub-states, prioritizing special move inputs over basic locomotion.

-  Orlando FL (Willing To Relocate)
-  +1 (321)-947-1328

Skills

Programming Languages: C++, C#, C, Python

Engines: Unreal Engine, Unity, Frostbite

Source Control: Perforce, Git

Tools: Jenkins, Jira, Visual Studio, Rider

Misc: System Design, Agile/Waterfall Methodologies, Debugging, Optimizing

Education

Master of Science, Interactive Entertainment, 2026
University of Central Florida - Orlando

Bachelor of Technology, Mechatronics, 2021
Manipal Institute of Technology - Manipal

Accomplishments

3rd Place | FIEA Game Jam 2026
Featured Developer | Simmer.io Aug 2020 Rewind
